Returns & exchanges

Architecture overview. Readable node and connection sheets follow.

Returns & exchanges

Readable detail sheet 1/3. Node numbers and page references preserve every directed connection.

#01 / Trigger / Implemented

Choose return / exchange

Return and exchange forms collect reason, pickup details, items and optional replacement SKU.

src/components/product-exchange-form.tsx:1

Next -> #2 (p2)

#02 / HTTP Request / Implemented

POST return request

Strict input schema and customerOrder ownership check.

src/app/api/v1/orders/[id]/return/route.ts:31

Next -> #3 (p2)

#03 / IF / Switch / Implemented

Delivered and within window?

Paid courier-confirmed delivery, no active refund and unexpired deadline are required. Exchange validates replacement availability without reserving it.

src/app/api/v1/orders/[id]/return/route.ts:60

Yes / accepted -> #4 (p2); No / rejected -> #7 (p3)

#04 / Backend Service / Implemented

Create care review ticket

Idempotent tickets and support conversation capture the requested order action.

src/server/care-order-requests.ts:131

Next -> #5 (p3)

Returns & exchanges

Readable detail sheet 2/3. Node numbers and page references preserve every directed connection.

#05 / Database Query / Implemented

tickets + returns decision

Admin approves or rejects the request; returns stores inspection decision and links ticketId/orderRawId.

src/server/admin-service.ts:1427

Next -> #6 (p3); Proposed exchange extension -> #9 (p4) [proposed]

#06 / Response / Implemented

Request status visible

Customer can follow the support request; approval does not disburse funds.

src/components/account-orders-returns.tsx:1

END: no outgoing connection

#07 / Error Handler / Implemented

Request failed

Validation, access, conflict or service errors are returned to the caller. Status and error shape depend on the specific route.

src/server/http.ts:69

Next -> #8 (p3)

#08 / Response / Implemented

Show error / retry

Failure end state. Caller receives the actual error; a retry may be offered by the UI.

src/server/http.ts:69

END: no outgoing connection

Returns & exchanges

Readable detail sheet 3/3. Node numbers and page references preserve every directed connection.

#09 / Backend Service / Planned

Arrange replacement fulfillment

Proposed extension: reserve replacement stock, arrange reverse pickup and issue a replacement order after inspection. No implementation mapping is claimed.

Planned design; no source implementation claimed.

Proposed outcome -> #6 (p3) [proposed]

Returns & exchanges

Complete directed connection register / no omitted success, failure or proposed edges

#01 Choose return / exchange -> #02 POST return request | Next

#02 POST return request -> #03 Delivered and within window? | Next

#03 Delivered and within window? -> #04 Create care review ticket | Yes / accepted

#04 Create care review ticket -> #05 tickets + returns decision | Next

#05 tickets + returns decision -> #06 Request status visible | Next

#03 Delivered and within window? -> #07 Request failed | No / rejected | FAILURE

#07 Request failed -> #08 Show error / retry | Next | FAILURE

#05 tickets + returns decision -> #09 Arrange replacement fulfillment | Proposed exchange extension | PLANNED

#09 Arrange replacement fulfillment -> #06 Request status visible | Proposed outcome | PLANNED

Note: Source implementation is documented; deployed configuration and provider connectivity are not verified.

Note: No automatic replacement order creation, replacement stock reservation or reverse pickup execution was found in the reviewed return request and approval paths. Those steps are Planned.
