Admin dashboard & operations

Architecture overview. Readable node and connection sheets follow.

Admin dashboard & operations

Readable detail sheet 1/3. Node numbers and page references preserve every directed connection.

#01 / Trigger / Implemented

Open admin control center

Admin shell groups operations and navigation.

src/components/admin/admin-shell.tsx:1

Next -> #2 (p2)

#02 / Authentication / Implemented

Require owner role

Server components redirect missing sessions, unauthorized roles or database unavailability.

src/server/admin-auth.ts:81

Next -> #3 (p2); Failure -> #8 (p3)

#03 / HTTP Request / Implemented

Admin route handlers

Each API independently authorizes the owner session; no central middleware is invented.

src/app/api/admin/dashboard/route.ts:7

Next -> #4 (p2)

#04 / Backend Service / Implemented

Run selected operation

Actual services cover products, inventory, orders, customers, payments, returns, support and settings.

src/server/admin-service.ts:52

Next -> #5 (p3)

Admin dashboard & operations

Readable detail sheet 2/3. Node numbers and page references preserve every directed connection.

#05 / Database Query / Implemented

Stored business collections

Repository queries and transactional mutations use native MongoDB driver.

src/server/db.ts:44

Next -> #6 (p3)

#06 / Database Query / Implemented

Audit critical changes

Critical owner operations record actor, action, resource, resourceId and details.

src/server/admin-auth.ts:224

Next -> #7 (p3)

#07 / Response / Implemented

Refresh admin view

Admin client refresh hooks request current data.

src/components/admin/use-live-admin-refresh.ts:1

END: no outgoing connection

#08 / Error Handler / Implemented

Request failed

Validation, access, conflict or service errors are returned to the caller. Status and error shape depend on the specific route.

src/server/http.ts:69

Next -> #9 (p4)

Admin dashboard & operations

Readable detail sheet 3/3. Node numbers and page references preserve every directed connection.

#09 / Response / Implemented

Show error / retry

Failure end state. Caller receives the actual error; a retry may be offered by the UI.

src/server/http.ts:69

END: no outgoing connection

Admin dashboard & operations

Complete directed connection register / no omitted success, failure or proposed edges

#01 Open admin control center -> #02 Require owner role | Next

#02 Require owner role -> #03 Admin route handlers | Next

#03 Admin route handlers -> #04 Run selected operation | Next

#04 Run selected operation -> #05 Stored business collections | Next

#05 Stored business collections -> #06 Audit critical changes | Next

#06 Audit critical changes -> #07 Refresh admin view | Next

#02 Require owner role -> #08 Request failed | Failure | FAILURE

#08 Request failed -> #09 Show error / retry | Next | FAILURE

Note: Source implementation is documented; deployed configuration and provider connectivity are not verified.
